Profile

Hello! I'm a Software Engineer from Portugal who's always up for a challenge.

My work has focused on highly-performant and scalable software systems, mainly programming in .NET environments.

Whenever I'm not at work, I try to spend most of my time enjoying the good weather with my family and friends (or welcoming them when the rain pours down on the town).

Skills

.NET, C#, ProtoBuf, REST APIs, OData, Relational Databases, Microsoft Azure, Scalable Systems, RabbitMQ, Elastic Search, F#

Experience

LetsGetChecked / Squad Lead

April 2022 - Present Porto

After one year as Backend Developer I took the role as squad lead. Managing a team of 2 Backend Developers, 2 Frontend Developers and 2 QAs. Helping them to do an excellent job by removing all their blockers and organising work between multiple teams. This role is expected to do up to 50% hands-on technical work, including active engagement in technical reviews.

LetsGetChecked / Senior Backend Developer

January 2022 - April 2022, Porto

LetsGetChecked / Backend Developer

March 2021 - January 2022, Porto

Part of a team that uses mainly F# and some C# to build the next-gen Medical tool. Help the team build a portal to facilitate the medical team's excellent work. Working with Kafka, ElasticSearch and Splunk.

Defined Crowd / Backend Developer

April 2020 - March 2021, Porto

Backend Developer in Payments team. Working with C#, SqlServer, RabbitMQ, ElasticSearch and Kibana.

Semasio / Backend Developer

August 2016 - April 2020, Porto

After two years as a Full Stack Developer, I had the opportunity to start working as a Backend Developer. My development was focused on highly-performant software components such as inter-process communication, low-memory allocation big data ingestors, and faster processing. I've also worked on migrating some larger

monolithic parts into smaller micro-services that run in Azure's Service Fabric. The latest big project I worked on was built from scratch to run as a Service Fabric Service, focusing on scalability and aiming to help marketers engage and find websites with specified desired content.

Semasio / Full Stack Developer

August 2014 - August 2016, Porto

Semasio is focused on helping marketers engage with precisely the right consumers by creating custom audiences tailored to each marketing goal. What sets the company apart is always to provide the client with complete control, transparency, and ownership via its proprietary platform. The company is spread out in three different countries: Portugal (Development), Germany (Business) and Denmark (R&D).

My development for the UIP system was focused on building a straightforward, intuitive, and quick way for the customer to specify their audience. We used a framework called Ext.NET with a lot of custom components. Technologies used: NET, C#, OData. Git for source control and Visual Studio online for project management.

Education

Faculty of Engineering, University of Porto / Master

September 2009 - Jun 2014, Portugal

Master in Informatics and Computing Engineering.

Languages

Portuguese - Native

English - Upper-Intermediate(B2)

Hobbies

Music, Tv Shows/Movies, Cooking, Analog photography
